

UBOS NA ALCOHOL SA TINDAHAN?

NO ALCOHOL? NO PROBLEM

DISINFECTANT ALTERNATIVES

SOAP WORKS BEST AGAINST CORONAVIRUS

Make sure to wash hands, face and surfaces for **at least 20 seconds**.

USE LIQUID BLEACH (5-6%)*

Bleach is a standard disinfectant in laboratories and hospitals.

*See Sodium hypochlorite concentration in bleach label

1 TO DISINFECT SURFACES: *STRONG Chlorine water*

9 Glasses Water

+

1 Glass Liquid Bleach*
Zonrox, Winrox, etc.

Mix Thoroughly

2 TO DISINFECT HANDS: *MILD Chlorine water*

9 Glasses Water

+

1 Glass Bleach Solution
from 1

NO LIQUID BLEACH? USE POWDERED CHLORINE

1 TO DISINFECT SURFACES: *STRONG Chlorine water*

2 Liters Water

+

1 tbsp. chlorine powder

Mix Thoroughly

2 TO DISINFECT HANDS: *MILD Chlorine water*

20 Liters Water

+

1 tbsp. chlorine powder

IMPORTANT NOTES:

There are other ways and concentrations to dilute bleach, this is not the only effective one.
Hypochlorite (the active ingredient) is an unstable product,
Bleach solutions need to be made fresh every couple of days.
Store in an opaque (not transparent) container.
